

More Precision

opto**NCDT** ILR // Laser distance sensors

- *Non-contact distance measurement:
more than 300m without reflector
more than 3000m with reflector*
- *Excellent repeatability and linearity*
- *Short response time*
- *Compact sensor design*
- *Various interfaces*
- *Sighting laser for easy set up*
- *Excellent price-performance ratio*

Laser distance sensors

Sensors in the optoNCDT ILR series are optoelectronic sensors for non-contact displacement, distance and also speed measurement. The large measuring range of the laser distance sensors enables measurements on critical surfaces such as, e.g. hot metal, from a safe distance or the regulation of large travel displacements with a small installation size. Measurements without wear and thus a long service life are made possible due to the non-contact measurement technique. Depending on the application, there are four series available with different focuses on accuracy and measuring speed.

The sensors are designed for operation with and without reflector and are thus very flexible to use. Due to their robust construction and compact design, the ILR sensors are used indoors and outdoors for many different measurement tasks, both for static as well as moving measurement objects. The exact positioning of the sensor can be performed easily due to the switchable sighting laser.

Time of flight measurement principle

The ILR102x, 103x, 110x, 115x and 119x sensors operate according to the time of flight measurement principle. A laser diode in the sensor produces short laser pulses which are projected onto the target. The light reflected from the target is recorded by the sensor element. The time of flight of the light pulse to the target and back determines the measurement distance. The integrated electronics in the sensor derives the distance using the time of flight and conditions the signal for the analogue and digital output. Sensors using this principle are not sensitive to external light.

Phase comparison measuring principle

The ILR118x sensors operate according to the phase comparison principle. High frequency modulated laser light with low amplitude is transmitted to the target. Depending on the distance of the object, the distance changes the phase relationship between transmitted and received signal. Sensors using this principle operate with high accuracy for measurement distances up to 150 metres.

Compact & reliable Sensor ILR 1030/1031

- Measuring ranges 0.2 ... 50m
- Linearity $\pm 20\text{mm}$
- Repeatability $< 5\text{mm}$
- Resolution 1mm
- Measurement with and without reflector
- Analogue output 4 ... 20mA
- Very compact plastic housing
- Easy adjustment with laser sighting
- Laser class 1 options available
- IP65

Page 4-5

Compact & fast ILR 1020/1100/1150

- Measuring ranges 0.2 ... 10m
- Linearity $\pm 8 ... \pm 40\text{mm}$
- Repeatability $\pm 4 ... \pm 10\text{mm}$
- Resolution from 0.1mm
- Fast response time
- Interface RS422/SSI
- Analogue output 4 ... 20mA
- Compact sensor design
- Sensor configuration via touch keys
- IP67

Page 6-7

Compact & fast (Reflector) ILR 1021/1101/1151

- Measuring ranges 0.2 ... 250m
- Linearity $\pm 3 ... \pm 60\text{mm}$
- Repeatability $\pm 2 ... \pm 10\text{mm}$
- Resolution from 0.1mm
- Fast response time
- Interface RS422/SSI
- Analogue output 4 ... 20mA
- Compact sensor design
- Sensor configuration via touch keys
- IP67

Industrial Standard with high Precision ILR 1181/1182/1183

- Measuring ranges 0.1 ... 150m
- Linearity $\pm 2 ... \pm 5\text{mm}$
- Repeatability $< 0.5\text{mm}$
- Resolution 0.1mm
- Measurement with and without reflector
- Interface RS232/RS422/SSI/Profibus
- Analogue output 4 ... 20mA
- Integrated heating (option)
- Small spot diameter
- IP65

Page 10-11

High-Performance Sensor ILR 1191

- Measuring ranges 0.5 ... 3000m
- Linearity $\pm 20 ... \pm 60\text{mm}$
- Repeatability $< 20\text{mm}$
- Resolution 1mm
- Measurement with and without reflector
- Distance and speed measurement
- Interface RS232/RS422/SSI/Profibus
- Analogue output 4 ... 20mA
- High measuring rate
- With integrated heating
- IP67

Page 12-13

- Measuring range up to 15m on diffuse reflecting targets / 50m on reflector
- Very short response time
- Small size
- Excellent price-performance ratio

The laser distance sensors ILR1030/1031 operate according to the time-of-flight technology. Thanks to this technology the sensors permanently offer – independent of environmental conditions such as surface characteristics, dark colour or present external light – accurate, reliable and clear as well as reproducible measurement results.

³⁾ when crossing 0°C an additional heating may be required

optoNCDT ILR 103x-LC1 use a semiconductor class 1 laser. With this laser class no protection is needed.

optoNCDT ILR 1030/1031 operate with a wavelength of 660nm (visible, red). The maximum optical output is ≤ 1 mW. The sensors are classified in Laser Class 2. Class 2 lasers are not notifiable and a laser protection officer is not required either.

Spot diameter ILR 1030 / 1031

- Measuring range up to 10m on diffuse reflecting targets
- Short response time
- Excellent price-performance ratio
- Fast sensor set configuration via touch keys

Gaging sensors of the series optoNCDT 1020/1100/1150 are designed for non-contacting measurements at distances of up to 10m. These measurements are required for position determination, attendance checking, type classification and for machine control in numerous fields of application.

Precise sensor alignment

The aiming laser can be turned on for accurate alignment of the sensor with the measurement object. For mounting the sensor a mounting bracket and a fine adjuster are available as accessories, which simplify the precise alignment of the sensor to the measurement object.

Spot diameter ILR1020

Spot diameter ILR1100/1150

- Measuring ranges up to 250m with reflector
- Short response time
- Excellent price-performance ratio
- Fast sensor set configuration via touch keys

Distance sensors of the series optoNCDT 1021/1101/1151 are designed for non-contact measurements against objects up to 250m. These distance sensors need a special reflector on the measurement object with the sensor being matched to its reflective properties. The use of this reflector facilitates measurement distances of up to 250m with excellent accuracy.

Precise sensor alignment

The aiming laser can be turned on for accurate alignment of the sensor with the measurement object. With large measurement distances this laser is adjusted using the optical alignment aid available as an accessory. For mounting the sensor a mounting bracket and a fine adjuster are available as accessories, which simplify the precise alignment of the sensor to the measurement object

- Measuring range up to 80m on diffuse reflecting surfaces, up to 150m with reflector
- Option with integral heating
- Easy adjustment with laser sighting
- Precise measurement on various surfaces
- Practical mounting grooves for easy installation
- Accessories for harsh environments

Sensors in the optoNCDT ILR 1181/1182/1183 series are optoelectronic sensors for non-contact distance and displacement measurement for industrial applications. Both sensors operate according to the phase comparison principle, whereby higher precision can be achieved. They can be aligned and positioned in use with a visible laser beam with little effort.

The optoNCDT ILR 1182 series operates with a 50Hz measuring rate and is therefore suitable for fast processes. The mounting grooves on the housing offer flexible mounting options for many situations.

- Measuring range 500m in diffuse reflecting surfaces, up to 3000m with reflector
- Distance and speed measurement
- Integrated heating
- For fast measuring events
- Easy installation
- Accessories for harsh environments

Sensors in the optoNCDT ILR 1191 series are optoelectronic sensors for non-contact distance and speed measurement for industrial use. The sensor is designed for very large measuring ranges, with and without reflector. Due to the very high measuring rate of the sensor, moving objects can be measured easily. The sensor operates according to the laser pulse runtime principle and is therefore particularly well suited to applications with large distances.

Commissioning of the sensor is straightforward due to a variety of interfaces and easy mounting options. The optoNCDT ILR 1191 is fitted with an integrated heater for outdoor use. A sighting device is also integrated for alignment.

Setup and configuration software

Software for easy configuration of the sensor is included as standard. All settings can be conveniently performed with this using a Windows interface on a PC. The sensor parameters are transmitted to the sensor via the serial port and can also be saved if required. The software also contains a module which can display and store the measurement results. The connection to the PC is made using the respective sensor cable with a USB converter.

**Applications****Position measurement on gantry cranes**

Numerous measurement tasks on gantry cranes must be performed: Positioning of the trolley, detection and dimensioning of containers and monitoring of the minimum clearance between the cranes. The ILR1191 with a very large measuring range and low response time is designed for these measurement tasks.

**Acquisition of coil diameters**

The quantities of steel, paper and fabric wound on and off are monitored via the acquisition of coil diameters using laser probes.

**Level measurement in container, tanks and silos**

The quantities of steel, paper and fabric wound on and off are monitored via the acquisition of coil diameters using laser probes.
